## Customizing PracticeMaster Guide

### **Purpose of Guide**

PracticeMaster is a comprehensive practice management software program for law firms that incorporates a great deal of features. So many features, in fact, that we created a guide to help you know where to start.

PracticeMaster is set up so that it can be used out of the box when you start using the software. However, PracticeMaster's real strength and power lies in its **tremendous flexibility**.

To help you harness the power of the software, we have developed this *Customizing PracticeMaster Guide*. This guide will help you learn how to take advantage of that flexibility, help you learn how to configure PracticeMaster to best meet your firm's needs, and show you how you can customize the different areas of PracticeMaster to work for you. With this guide, you can familiarize yourself with the areas you want to incorporate first, which can help you develop a rollout plan.

You don't need to read this guide from cover to cover (although you most certainly can). Instead, you can read only the areas you are interested in when you are ready to work with those features. For example, if you are primarily interested in implementing the Calendar, just read that section for now. Likewise, if you want to learn about Document Assembly, read that section. Many sections of this guide cover the basics and also provide the in-depth resources you will want to use to learn about best practices and how to implement those features.

You may simply want to scan the Table of Contents and decide which areas you want to work with first. You can do the customization yourself; or, if you prefer, you can work with one of our many qualified consultants (*page 88*) to help you streamline this process.

### How to Use This Guide

The information in this guide is presented in three distinct sections.

### Part 1 - Customizing the Database

The content in this section is aimed towards the Law Firm Administrator or the person(s) most interested in deciding what information needs to be included in the database. This section presents information to consider when determining how you want to modify the data files to best meet your firm's needs. The information in Part 1 discusses the different types of files, how to use File Maintenance to modify and create fields and files, how to use Areas of Practice, how to modify your data entry screens using the Form Designer, and where you can learn about how to use the extremely powerful WorkFlows to help manage your cases.

### Part 2 - Day-to-Day Features

The content in this section includes how you can easily customize the various features that are used by attorneys, paralegals, and all other employees in the firm on a daily basis. This section includes features such as Quick Clicks, the PracticeMaster Calendar, Outlook integration, conflict of interest searching, converting items to fees, Task Folders for navigation, and more.

### Part 3 - Focus Areas

The content in this section includes information on the areas that you will want to implement at some point once PracticeMaster is installed. It's not easy to change everything all at once, and these areas are ones that can be implemented when needed or when you are ready to take the next steps, such as document management, document assembly, and PracticeMaster Report Writer.

## **Part 1 - Customizing the Database**

Part 1 of the *Customizing PracticeMaster Guide* outlines the process of customizing the database to match your firm's specifications.

The content covered in this section includes:

- An overview of the *File Maintenance* program, including instructions for adding fields and indexes
- An introduction to the *Form Designer*, with instructions on adding fields to PracticeMaster form layouts
- Information on the various *types of files* available for customization, and an in-depth look at how to determine which file should be used to store particular types of information
- An introduction to *Areas of Practice*, and instructions on how to install predefined Area of Practice templates
- An introduction to *WorkFlows*, a powerful tool used for automating common tasks

### File Maintenance

 Menu:
 Maintenance | File Maintenance

 Task Folders:
 Maintenance | File Maintenance

The File Maintenance program is one of the most powerful parts of the PracticeMaster software, allowing you to customize the data files as you see fit. Add additional files and fields to track the information your firm needs most, and remove fields that aren't of use. You can also customize file indexes to speed up the process of sorting records on the **List** tab of each file.

The File Maintenance window consists of a file tree structure that includes all files in PracticeMaster. Clicking the plus (+) symbol to the left of a branch expands the branch to display the various files. Likewise, clicking the minus (-) symbol to the left of a branch will collapse its contents.

**Note:** The File Maintenance program is an exclusive task, meaning that all other users must exit PracticeMaster before you can access this feature.

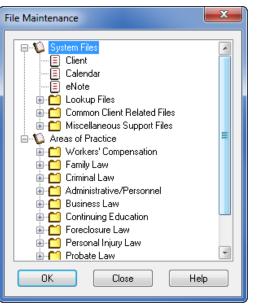

Figure 1, File Maintenance window

**Tip:** You will be prompted to make a backup prior to accessing the File Maintenance program. Making a backup allows you to quickly reverse any changes made and protects you from potential data corruption if the File Maintenance program is interrupted.

### **File Definitions**

Once the File Maintenance window is displayed, double-click the desired file to display the File Definition window. The File Definition window consists of **Main**, **Field**, **Index**, and **Utility** tabs. The **Field** and **Index** tabs are the most important tabs in File Maintenance. These tabs allow you to access the information that can be customized.

### Field Tab

The **Field** tab in the File Definition window is used to add, edit, rename, or delete fields in a file *(Figure 2)*. A maximum of 435 fields can be defined in a file.

Fields can be added or modified using the **Field** tab. Once a field has been added, it can then be added to a form layout using the Form Designer (*page 8*). Once a field has been added to Form Designer, you can begin using that field during data entry.

Each field must be assigned a **Field Type**. There are fifteen field types in PracticeMaster. Field types are used to classify the type of information that can be entered into a field. Common field types include alpha, date, number, money, phone, e-mail, web page, and more.

**Note:** For more information on field types, see PracticeMaster Help.

The **Help Text** field allows you to enter explanatory text that will be displayed as a screen tip when a user hovers over a field during data entry. This makes it easy for users to determine the purpose of a specific field and lets them know what they need to enter.

When creating or modifying fields, you can also edit the **Custom Properties** for that field. The Custom Properties available differ depending on which **Field Type** is selected. Some particularly useful Custom Properties are explained below; full details on the complete list of Custom Properties can be found in PracticeMaster Help.

Required	Fields that are marked as <b>Required</b> must be filled in before a user can save the record.
Track History	The <b>Track History</b> field is used in conjunction with the History Tracking feature ( <i>page 75</i> ) to provide an audit trail of additions and changes made to a particular field.
Include in Conflict Search Include in Contact Search Include of Conflict Report	These fields are used in Conjunction with the Conflict of Interest and Contact Search reports. More information on each of these fields can be found on page 64 of this guide.

	Done Cancel

Figure 2, File Maintenance - **Field** tab

#### ▶ To add a field to an existing file definition

- 1. From the PracticeMaster Task Folders, select the **Maintenance** tab, and then click the **File Maintenance** icon.
- 2. From the File Maintenance window, click the plus (+) sign next to the System Files or Areas of Practice to display the corresponding list(s) of files.
- 3. Double-click the file you want to edit and select the **Field** tab.
- 4. Click the icon or press Ctrl+N. A field named "New Field" will be created in the Field IDs list.
  - a. Replace the "New Field" text with the name you want to use for your field.
  - b. Select the desired Field Type.
  - c. Optionally, modify the default Field Name.
  - d. Select the desired **Custom Properties**.
    - If the field should be included in the Conflict of Interest Search, be sure to select the **Include in Conflict Search** check box.
  - e. Optionally, use the and icons to reposition the field in the list of Field IDs.
     The order of the Field IDs determines the order of the fields on the **Default** file layout.

- 5. Click Done.
- 6. Use the Form Designer to add the field to the data entry screen. More information on the Form Designer and form layouts can be found on page 8.

### **Index Tab**

Indexes are used to specify the order in which records are displayed within a file. Indexes defined in File Maintenance are permanent indexes. Although you can click on any column heading in a lookup window to change the sorting order, permanent indexes provide the added benefits of faster sorting and the ability to define multiple sort orders (e.g., sort by client name and then primary timekeeper). Each index can have up to four sort orders defined. Once defined, you can use indexes in Editor windows, QuickViews, and reports. Up to fifteen user-defined indexes can be created per file.

File Definition - Systen	n Files   Client (CMCLIENT)	?
Main Field Index	Utility	
Index IDs Client ID Alternate Search AoP ClientID Name Contact Active Billing Attomey Location	Description: Name Soft Order Order by: Name Then by: Secure_Client Then by: Client_ID Then by: No Field	✓ Protected
		Done Cancel

Figure 3, File Maintenance - Index tab

#### To create a new index

1. From the PracticeMaster Task Folders, select the **Maintenance** tab, and then click the **File Maintenance** button.

- 2. From the File Maintenance window, click the + next to System Files or Areas of Practice to display the corresponding list of files.
- 3. Once you have located the desired file, double-click the file and select the **Index** tab.
- 4. Click the icon to add a new index.
- 5. Under the **Index IDs** list, enter the new **Index ID** by replacing the "New\_Index" text shown.
  - a. Enter the desired **Description**.
  - b. Enter the desired **Sort Order**.
- 6. Click **Done** to complete the process. When asked to confirm whether you want to continue, click **Yes**.

### **Form Designer**

#### Menu File | Open | (File Name) | Edit | Form Designer

The Form Designer is used to create form layouts. Form layouts are used to determine the arrangement of fields on the data entry screens in an Editor window. The Form Designer is also used to specify the tab order of the fields in an Editor window. This makes it easy to set the flow of data entry to your firm's specifications. The Form Designer uses a graphical user interface complete with drag-and-drop capabilities.

To access the Form Designer, you must be on the **List** tab of the file you want to edit. From the **List** tab, click **Edit**, then select **Form Designer**.

Figure 5, Form Designer window

#### To add a field to a PracticeMaster form layout

- 1. From the PracticeMaster **File** menu, point to **Open** and select the file for the form layout you want to edit.
- 2. From the **Edit** menu, select **Form Designer**.
- 3. In the Form Designer window, select the tab (page) where you want the new field to appear.
- 4. Click the 🔼 (Add Field) button on the toolbar.
- 5. In the **Field Selection List** (*Figure 6*), locate and double-click the field you want to add. The field will appear at the top left corner of the form.
  - a. Click the new field and hold down the mouse button.
  - b. While holding down the mouse button, drag the field to the desired location on the form.

- 6. Click the 🔎 (Run Form) button on the toolbar.
- 7. Click **Yes** when prompted to save your changes.

The field will now be available for data entry.

**Tip:** The Form Designer toolbar includes various sizing and positioning buttons that help place newly added fields in the desired position. More information on the Form Designer toolbar can be found in PracticeMaster Help.

All fields in a file can be added to one or more pages. The **Other Pages** column of the **Field Selection List** (*Figure 6*) includes a count of all pages that the selected field appears on (not including the currently selected page).

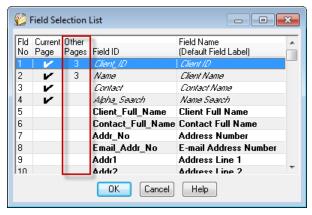

Figure 6, Other Pages column of Field Selection List

You can organize related fields by adding them to a new page. For example, the **Court** page contains fields specific to an individual matter's court information (*Figure 7*).

Figure 7, Client file **Court** tab

#### ▶ To Add a Page in the Form Designer

- 1. From the Form Designer window, click the icon, or right-click the form layout background and select the **Add New Page** menu option.
- 2. A new page will automatically be added with a default page name.
- 3. Right-click the page and select the **Rename Page** menu option.
- 4. The **Page Name** window will be displayed allowing you to specify the desired page name.

You can now add the desired fields to the page.

After adding or otherwise changing fields in the form layout, you may also want to edit the tab order of the fields. The tab order represents the order used when a user tabs through the fields on the page.

Figure 8, Form Designer window with Tab Order displayed

#### ▶ To Set the Tab Order of Fields on a Page

- 1. From the Form Designer, click the tab of the desired page.
- 2. Click <sup>123</sup>, or right-click the page and select the **Set Tab Order** menu option.
- 3. A number in a colored box will be shown next to each field. These numbers represent the current tab order.
- 4. Once the numbers are displayed, you have two options—you can reset the tab order for all fields, or you can reset the tab order for selected fields.

**To reset all fields:** Click the field you want to come first in the new tab order. Click the field you want to come second in the new tab order. Click the field you want to come third in the new tab order, etc. until all fields are in the desired order. The tab order will update automatically as you click on each field.

**To reset selected fields:** Set the counter by holding the *Ctrl* key and then clicking on a field. Although nothing will have appeared to happen, the counter will have been set to that number. The next field you click will increment the counter by one and adjust all subsequent fields. For example, let's say you want to switch fields 8 and 9. First set the counter to 7 by holding the Ctrl key and then click on field 7. Next click on field 9 which will be changed to

field 8. The old field number 8 will automatically be changed to 9 since there cannot be two fields with the same tab order.

5. Finalize your changes by clicking the 🖼 (Run Form) button.

**More Info:** Additional information regarding the Form Designer can be found in PracticeMaster Help.

### Implementing New Fields

To summarize, there are two parts to adding additional fields to existing data files.

- Add the field to the file via File Maintenance.
   See "To Add a Field to an Existing File Definition" on page 6
- 2. Add the field to the data entry screen via the Form Designer. See "To Add a Field to Form Layout" on page 9

To demonstrate this entire process, the following example provides step-by-step procedures using a specific scenario.

### Example: Adding a "Date of Last Contact" field to the Client File

Let's say you want to add a new date field called "Date of Last Contact" to the Client File. You need to add the new field to the data file structure via File Maintenance and then add the field to the data entry screen via the Form Designer.

**Note:** All other users must exit the software in order to perform these steps.

#### Part 1 - To add a "Date of Last Contact" field to the Client file

- 1. From the *Maintenance* menu in PracticeMaster, select *File Maintenance*.
- 2. Double-click Client.
- 3. Click the Field tab.
  - a. Click the button to insert a new field.
  - b. Type over the "New\_Field" text with the appropriate name for the field. For this example, we will name the field "Date of Last Contact".
  - c. From the Field Type drop-down, select Date.
- 4. Click **Done**.
- 5. Click Yes.
- 6. When the Task Completed message is displayed, click **OK**.

File Definition - System Files	
Main Field Index Uti Field IDs X + + Conty_Jurs Court_Jurs Judge Verdict	Field Type:     Date     Protected       Field Name:     Date of Last Contact       Help Text:

L	Done Cancel

Figure 9, Example of **Date of Last Contact** Date field

#### Part 2 - To add the "Date of Last Contact" to the Form Layout

- 1. From the File menu, point to Open and select Client.
- 2. From the **List** tab, select *Edit* | *Form Designer*.
  - a. Click the page on which you want the **Date of Last Contact** field to appear.
  - b. Click the 🙆 button on the Form Designer toolbar.
    - i. From the **Field Selection List** window, scroll down and select the "Last\_ Contact\_Date" field.
    - ii. Click **OK**.
  - c. Click and drag the field to the desired position.
  - d. Click the 🚔 button.

Figure 10, Date of Last Contact field added to Client file

### **Customizing the Data Files**

One of PracticeMaster's most powerful features is its customizability. When first starting to use PracticeMaster, most firms start out using the default data files provided with the software. PracticeMaster's default data files store information common to the majority of firms. However, before long, you may find that you want to add fields to PracticeMaster for storing additional data that your firm needs to track.

### **Determining What Data to Store**

Before adding additional files and fields to PracticeMaster, you need to determine what information needs to be tracked, reported on, and used in documents. You must gather the information needed, organize it into categories, and then determine the best method for storing the data.

The easiest way to do this is to gather hard copies of all of the commonly used documents, beginning with client questionnaires and client intake forms. Include form letters, e-mail, motions, reports, communications, and any other commonly used documents. These documents will help you decide what information to track in your database files.

Once you've gathered the hard copies, highlight all of the information that will be stored in PracticeMaster. You will then use this as a blueprint to determine whether to add a field to an existing file or create a new file for storing the information.

Keep the hard copies of the documents. You can use these documents later when you start to incorporate the document assembly features in PracticeMaster (*page 83*).

### **Data Storage Options**

Once you have determined what data you want to store in PracticeMaster, you must decide where the data should be stored. You can add fields to existing files, or you can add new files. There are several types of files in PracticeMaster.

The following diagram of the File Maintenance window shows the different types of files. For example, you can add fields to the Client file, the Calendar File, or the Contact file. The Contact file is an example of a Lookup file, which is used to store information that can be referenced via a field in another file. You can create your own user-defined Lookup files for information you want to reference in another file. Common Client Related files and Area of Practice files also have unique characteristics, as shown in the diagram.

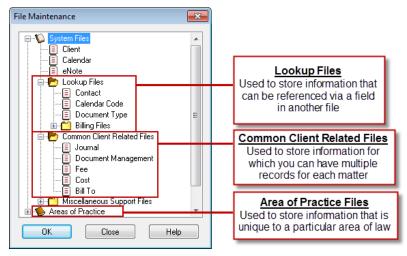

Figure 11, Customizable Files in PracticeMaster

The following information lists the different files where data can be stored and describes the type of data stored in each file.

**Client File** Use the *Client File* to store single pieces of information that can apply to all matters, regardless of the matter's Area of Practice. Related fields can be combined onto a single page using the Form Designer (*page 11*). For example, the **Court** tab contains fields relating to a particular matter's court information, such as County of Filing, Court of Jurisdiction, and Judge (*Figure 12*).

#### Advantages

#### Disadvantages

- Available for ALL matters
- Can use Category pages to only display data for matters assigned to a specific Area of Practice (*page 23*)
- Does not require a File Access code in Word document assembly
- Cannot store multiple records for a single matter (e.g., children)

State of Jurisdiction	Nebraska	
County of Jurisdiction	Lancaster	
Court of Jurisdiction	Nebraska Workers' Compensation Court 👻 State of Nebraska Workers' Compensation Court	
Judge	Olsen/Douglas A.	

Figure 12, Client File, **Court** tab

**Contact File** Use the *Contact File* to store information common to different types of contacts in this file, such as address, e-mail, gender, contact preferences, etc. Contacts can be categorized by one or more types when the individual contact is added, such as Attorney, Medical Provider, Adjustor, etc. You can use the Contact File to store fields for one or more types of contacts. For example, you may have a field for attorneys that lists the states in which they are licensed to practice law.

#### Advantages

- One location for contact information
- Data optionally synchronizes to
   Outlook
- Use Category pages to prevent data from showing for all contacts

CommonUse Common Client Related Files to store information for which you can haveClient Relatedmultiple records for each client. The Fee file is an example of a common clientFilesrelated file. All matters can have fees, and each matter can have multiple fees.

#### Advantages

- Stores multiple records per matter
- Can be used for multiple areas of practice
- Used for information that applies for all matters
- Can optionally show a tab in the Client Editor window (*List tab* | *Edit* | *Configure Client Pages*)

Figure 14, Example of a Common Client Related page

Area ofUse Area of Practice Files to store information that is unique to a particular area ofPractice Fileslaw. For example, personal injury matters may require medical record information<br/>that is not required for real estate matters. Likewise, real estate matters may require<br/>inspection information that is not required for personal injury matters.

#### Advantages

- Data is grouped by file for that type of matter (e.g., spouse info, dependents, stockholders, etc.)
- Accommodates one record or many records for each matter
- Can store contact information in Area of Practice file or link to Contact File (virtual)
- The tabs change in the Client file based on the client's Area of Practice
- Can use the Import Area of Practice feature to import file structures

- **Lookup Files** Use a *Lookup File* to store information that can be referenced via a field in another file. Lookup files can vary in complexity.
  - The **Document Type** file lookup file that allows you to select from a list of document types.
  - The Contact file is a lookup file. You can view contact information via the Client File to provide an address on the **Address** tab.
  - You can set up a Lookup File to store additional signatory and letterhead information for users.
  - You can set up a Case Status lookup file to track a matter's current case status. More information on this example can be found on page 33 (*Figure 25*).

#### Advantages

#### Disadvantages

- Can add a field to any file to link to a record in a lookup file
- New records can easily be added "on the fly"
- Enter data once and link to it multiple times
- Cannot restrict selection to existing values

Figure 16, Example of a Lookup File

CategoryCategory Pages are a special type of page that are used in the Client file, Contact file,Pagesand Journal file. You can use the Form Designer to design how the pages will look.

- **Client category pages** are configured for individual Areas of Practice (e.g., Personal Injury, Family Law, Workers' Compensation, etc.). These pages will only appear when a client belonging to that Area of Practice is selected.
- **Contact category pages** are configured for individual contact categories (e.g., Attorney, Insurance Adjuster, Witness, etc.). These pages will only appear when a contact belonging to that contact category is selected.
- **Journal category pages** are configured for individual journal record types (e.g., E-mail, Phone Task, Research Task, etc.). These pages will only appear when a journal record of that record type is selected.

#### Advantages

#### Disadvantages

- Allows you to limit data entry to associated record types
- File limit of 435 fields
- Can reduce the number of visible pages, improving the organization of the client file.

**More Info:** Additional information regarding Category Pages can be found in Knowledge Base Article **R10566**, "Category Pages in PracticeMaster."

### Virtual Fields

A virtual field is a field that links to another field in a lookup file (*page 22*). Virtual fields are used to display information stored in lookup files in another file. For example, several of the fields on the **Address** tab of the Client file are virtual fields that link to information stored in the Contact file (*Figure 18*). Virtual fields are read-only; that is, the information cannot be edited from the currently opened file. Instead, changes must be made via the file that contains the virtual field information.

Virtual fields are an ideal method for displaying information that is already stored in a field via a lookup file. Rather than reentering the information again in an identical field in the file in which you want to display this information, you can simply link to the lookup file. This eliminates the risk of potentially entering inconsistent data or forgetting to update one or more fields.

Figure 18, Virtual Fields in the **Client** file

To demonstrate how virtual fields work, the following example provides step-by-step procedures for a specific scenario. Let's say you want to display a contact's phone number and e-mail address on the calendar record. Doing so allows users to see this information without having to click a button to open the Contact file.

#### ▶ Part 1 - To add "Contact Phone #" and "Contact E-mail" fields to the Calendar file

- 1. From the *Maintenance* menu in PracticeMaster, select *File Maintenance*.
- 2. Double-click Calendar.
- 3. Click the **Field** tab.
  - a. To add the **Contact Phone #** field to the Calendar file:
    - i. Click the button to insert a new field.
    - ii. Type over the "New\_Field" text with the appropriate name for the field. For this example, we will name the first field "Contact\_Phone".
    - iii. From the Field Type drop-down, select Virtual.
    - iv. Replace the **Field Name** text with the desired label for the field. For this example, we will enter "Contact Phone #".
    - v. From the Lookup Field drop-down, select Related\_Party.
    - vi. From the Field To Copy From drop-down, select Phone 1 (Figure 19).
  - b. To add the **Contact E-mail** field to the Calendar file:
    - i. Click the button to insert a new field.
    - ii. Type over the "New\_Field" text with the appropriate name for the field. For this example, we will enter "Contact\_Email".
    - iii. From the Field Type drop-down, select Virtual.
    - iv. From the Lookup Field drop-down, select Related\_Party.
    - v. From the Field To Copy From drop-down, select E-mail Address.
- 4. Click Done.

#### ▶ Part 2 - To configure the Calendar file to display contact phone and e-mail information

- 1. From the File menu, point to Open and select Calendar.
- 2. From the List tab, select *Edit* | *Form Designer*.
  - a. Click the page on which you want the **Contact Phone #** and **Contact E-mail** fields to appear.
  - b. Click the 📕 button on the Form Designer toolbar.
  - c. From the **Field Selection List** window, while holding down the Shift key, select the "Contact\_Phone" and "Contact\_Email" fields.
  - d. Click **OK**.
  - e. Click and drag the fields to the desired position.
  - f. Click the 🚔 button.

The fields will now appear on the calendar entry window (Figure 20).

### **Considerations for Where to Store Data**

With so many different types of files available for storing data, it is not always easy to determine which is the best option to use for the information you want to store. Below are some questions you can ask yourself to help determine which option is best suited for your purposes.

#### Can there be multiple instances of the data for a single matter?

If there is only one instance of the data, you can add the field to the Client File, the Contact File, or an Area of Practice file. But if there can be multiple instances, such as dependents for a client who is setting up a will, or medical providers for a personal injury case, this information must be stored in an Area of Practice File or a Common Client Related File.

#### Is the data used by a single Area of Practice?

If the data is used by a single Area of Practice, the data can be stored in the Client File or an Area of Practice File.

#### Is the data used by multiple Areas of Practice?

If the data is used by multiple areas of practice, the data can be stored in the Client File or a Common Client Related File.

#### Is the data already stored in another file?

If the data is already stored in another file, you can link to that information using a Lookup file such as the Contact file. You can also use Virtual fields to display fields from the file in which the data is stored.

#### Does the data pertain to a contact rather than a matter?

If the data is contact-specific rather than matter-specific, such as a contact's date of birth, the data can be stored in the Contact file.

**Note:** Keep in mind that there is a limit of 435 fields in a file. This limit typically is not encountered by most firms but should be kept in mind when determining where to add additional fields.

### **Examples**

Determining the file in which to store data involves weighing the advantages and disadvantages of each option and determining which method is the most useful for your firm. The following includes examples of fields you might want to store in PracticeMaster, options for how to do so, and the thought process used to determine which method works best.

### Example 1 - File Reference Number

Suppose all matters at your firm have a File Reference Number that is used to determine where the physical file containing matter information is stored. Each matter has a unique File Reference Number.

#### *Option A* Client file

Because this information is not limited to clients belonging to a single Area of Practice, and each matter has a unique File Reference Number, you can simply add a field to the Client file to store this information (*Figure 21*).

Figure 21, Example of a File Reference Number field

### Example 2 - Children in a Family Law Matter

Suppose you have multiple matters in the Family Law Area of Practice that require you to store information about children. Each matter can have a different number of children.

<i>Option A</i> Client file	You could add fields to the Client file to store information regarding children. However, because not all clients are Family Law Clients, information regarding children does not apply to all Areas of Practice. Furthermore, those clients who do belong to the Family Law Area of Practice may have multiple children. The number of fields you would need to add to the Client file to enter information for each child would depend on the number of children each client has, and that number could grow the next time a family law client retained your services. Therefore, this option is not practical.
<i>Option B</i> Client Category page	This option allows information to appear in the Client file for Family Law clients only. However, fields would still need to be added to the Client file, which presents the same issues described in Option A. Therefore, this option is not practical.
Option C Common Client Related file	Unlike Options A and B, a Common Client Related file would not require the creation of multiple fields in order to add records for multiple children. However, this option is not the best choice because records in a Common Client Related file are available to all clients regardless of Area of Practice.
<i>Option D (Recommended)</i> Area of Practice file	Creating a "Children" Area of Practice file for the Family Law Area of Practice limits that information to only those clients belonging to the Family Law Area of Practice. Furthermore, the Area of Practice file allows you to create a separate record for each child. You can also add additional fields unique to this type of information, such as date of birth, birth certificate, citizenship, etc. Therefore, this option is the best option ( <i>Figure 22</i> ).

Figure 22, Example of a "Children" Area of Practice file

### **Example 3 - Related Contacts**

Suppose you have several matters that require you to store contact information for multiple contacts. Each matter belongs to a different Area of Practice.

<i>Option A</i> Client file	Adding this information directly to the Client file will work to store information for a single contact; however, you would need to add additional fields for each additional contact. Therefore, this option is not practical.
<b>Option B</b> (Recommended)	A Common Client Related file allows you to link multiple
Common Client Related file	contacts to a single client record. An individual record is

A Common Client Related file allows you to link multiple contacts to a single client record. An individual record is created for each contact (*Figure 23*). You can use virtual fields in the Common Client Related file to link to the pertinent information in the Contact file (*page 24*).

### Example 4 - Employment Info in a Workers' Compensation Matter

Suppose you have multiple matters in the Workers' Compensation Area of Practice in which you need to track employment information. There is only one employer in Workers' Compensation matters.

Option A	You could add fields to the Client file to store this
Client file	information; however, you would not want these fields to
	be displayed for non-Workers' Compensation matters.
<b>Option B</b> (Recommended)	Creating an "Employment Info" Client Category page
Client Category Page	allows you to configure the fields you created in the Client
	file to appear only when a client belonging to the Workers'
	Compensation Area of Practice is selected (Figure 24).
Option C (Alternative)	As an alternative, you could store the employment
Area of Practice File	information in an Area of Practice file. Some firms prefer to
	store this Area of Practice-specific information in the Area
	of Practice files. For example, larger firms with many
	different Areas of Practice may encounter the 435 field

limit by adding the necessary fields to the Client file.

### **Example 5 - Case Status**

Suppose you want all matters at your firm, regardless of Area of Practice, to have a Case Status field that is updated each time progress is made on the case.

<i>Option A</i> Client file	You could create a field in the Client file to track the status of the case. For example, you could create an Alpha type field that uses a drop-down list to select from a list of predefined case statuses.
<i>Option B</i>	In some cases, a single field may not be able to contain the information you want to include regarding case status.
Lookup file	Instead, you could create a lookup file that contains the fields you want, such as a generic 'Status' field and then a more in-depth 'Status Description' field ( <i>Figure 25</i> ).

## **Areas of Practice**

PracticeMaster categorizes your clients by Area of Practice. You can use the Areas of Practice provided with PracticeMaster, modify those Areas of Practice, or create your own Areas of Practice from scratch. We recommend installing the Area of Practice templates provided with PracticeMaster (*page 34*).

### **Using Predefined Area of Practice Templates**

Several predefined Area of Practice templates are provided with PracticeMaster. An Area of Practice Template consists of predefined file definitions for an Area of Practice and may include samples of precoded documents and reports unique to each Area of Practice. All file definitions, documents, and reports provided with each Area of Practice Template can be modified.

Areas of Practice are installed with the PracticeMaster Trial Software with Sample Data. Areas of Practice are **not** installed in the Trial Software, with full-user versions, or with Starter Data. However, Areas of Practice can easily be installed by importing Area of Practice templates. Area of Practice templates provided with PracticeMaster are shown to the right.

Area of Practice Template	Base Name
Personal Injury (Plaintiff)	PI
Probate	PROBATE
Foreclosure	FORECLOS
Business Law	BUSLAW
Family Law	FAMILY
Wills & Trust	WILLS
Criminal Law	CRIMLAW
Real Estate	REALEST
Workers' Compensation	WC
Administrative	ADMIN
Continuing Education	CONT_ED

### **Installing Areas of Practice**

If you want to use the Area of Practice templates provided with PracticeMaster, they must be installed using the Import Area of Practice Template program.

#### ► To import an Area of Practice Template into PracticeMaster

- 1. Start PracticeMaster.
- 2. Click the Maintenance Task Folder.
- 3. Click the File Maintenance icon.
- 4. From the File Maintenance window, right-click **Areas of Practice** and select **Import AOP Template**.
  - a. Insert the CD into the CD drive.
  - b. In the **Import Path** box, click the **....** button.

- c. Navigate to the \APPS\TEMPLATE folder on the CD. All Area of Practice templates are stored on the CD in the \APPS\TEMPLATE folder in a subdirectory that is named after the Base Name of the template. The Base Names are listed in the previous table.
- d. Navigate to the folder on the CD where the desired Area of Practice is stored and open the folder.
- e. Double-click the \*.aop file in the folder. For example, if you are installing the Family Law Template, you would double-click the FAMILY.AOP file in the \FAMILY folder.
- f. Click **OK** to begin importing the template. Upon completion, the message "Import Successful" will be displayed. Click **OK** to clear the message.

**Note:** As an alternative method of installation, you can download the Areas of Practice from our Web site at **Tabs3.com/support/utilities.html**. Knowledge Base Article **R11568** provides instructions on downloading and installing Areas of Practice. Additional information regarding Area of Practice Templates can be found in Knowledge Base Article **R11568**, "Contents of PracticeMaster Area of Practice Templates."

## WorkFlows

A WorkFlow is a set of actions that occur when certain conditions are met, such as when a particular type of record is added or changed. WorkFlows are a powerful feature that can save you time by automating common tasks.

Here are some examples of procedures that can be automated using WorkFlows:

- A Fee Agreement is generated when a new matter is saved.
- When a fee is saved with over 8 hours, a WorkFlow notifies both the user and the Administrator of the error.
- When a Calendar record is deleted, a WorkFlow creates a Journal record with the calendar entry's **Description**, **Comments**, **User/Group** information, and **Due Date**. The user that deleted the calendar entry is also prompted to enter an explanation as to why the record is being deleted.

A single WorkFlow can perform up to 10 steps, or actions, including functions such as creating records, changing existing records, starting e-mails, sending eNotes, and more.

**More Info:** Additional information regarding WorkFlows can be found in the **WorkFlows Guide**, the WorkFlows<u>Training Video</u>, and in the following Knowledge Base articles at **support.Tabs3.com**.

- Knowledge Base Article R11307 "All About WorkFlows"
- Knowledge Base Article R11487 "Working with Indexes, Filters, and QuickViews"

# Part 2 - Day-to-Day Features

Part 2 of the **Customizing PracticeMaster Guide** is designed to introduce those features that will be accessed by the majority of users on a day-to-day basis. You can customize some features in PracticeMaster for the entire firm. PracticeMaster allows individual users to customize other features to meet their specific requirements.

The content covered in this section includes:

- The **Quick Clicks** pane and how it can be used to customize the way you view data on the **List** tab and in the Matter Manager
- How to customize the PracticeMaster calendar to display information in a way best suited to each user
- An introduction of Outlook integration
- The Conflict of Interest utility and how you can customize what data is searched and presented during conflict checks
- How to convert records to fees
- How the Task Folders can simplify the task of navigating the software
- Additional items that can be customized to suit user preferences

# **Quick Clicks**

The following subjects will be covered in the Quick Clicks section:

- Introduction to Quick Clicks
- Manage Quick Clicks
- List Preferences
- Column Layouts
- Filtering Data
- Sort Order
- QuickViews and Smart tabs

### **Introduction to Quick Clicks**

The Quick Clicks pane provides an easy way to access and organize data files in PracticeMaster. This pane provides single-click access to a variety of features that will help you navigate your data files. These features are organized in groups that are customizable on a per-user basis. The Matter Manager, which is used to quickly view relevant information for a matter, also includes the Quick Clicks pane.

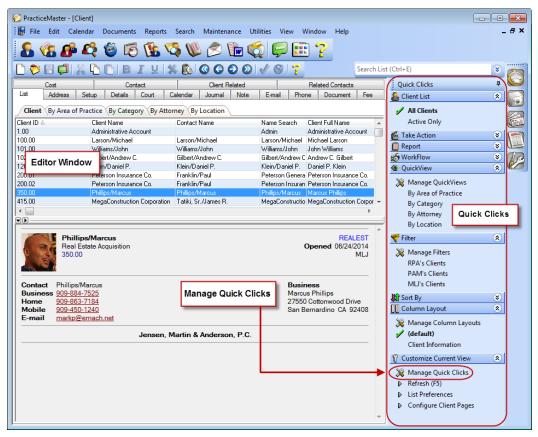

Figure 26, Quick Clicks pane for the Client file

By default, the Quick Clicks pane is docked on the right side of the Editor window. However, it can also be docked on the left side of the Editor window. This is accomplished by clicking on the Quick Clicks pane title bar and dragging it to the desired position.

The Quick Clicks pane features an Auto Hide mode, which hides the pane from view until it is needed. This is indicated by a pushpin icon. When the pushpin is displayed vertically, this indicates that Auto Hide mode is disabled, and the Quick Clicks pane is "pinned" to the Editor window. When the pushpin is displayed horizontally, this indicates that Auto Hide mode is enabled, and moving the mouse away from the Quick Clicks pane will cause it to slide out view. Moving your mouse over the **Quick Clicks** button will bring the pane back into view.

Figure 28, "Unpinned" Quick Clicks pane (**Auto Hide** enabled)

# Manage Quick Clicks

The Quick Clicks pane can be customized by each user using the Manage Quick Clicks window.

The **Manage Quick Clicks** window provides customization for each of the Quick Clicks groups all in one window (*Figure 29 and Figure 30*). You can access this window by selecting **Manage Quick Clicks** under the **Customize Current View** group of the Quick Clicks pane. This window allows you to add, copy, edit, and delete items in your groups; provides control over which groups, folders, and items are available in the Quick Clicks pane; and determines the order in which they will be displayed.

**Note:** The **Manage Quick Clicks** window can also be opened by clicking any of the "Manage" options found in each Quick Clicks group.

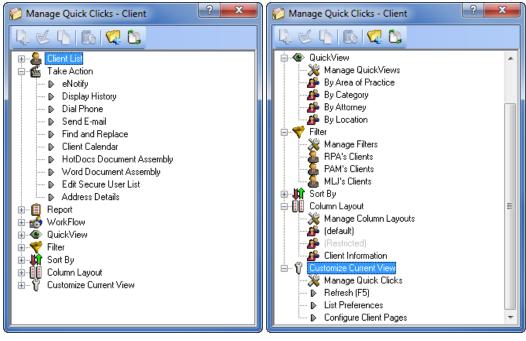

Figure 29, Manage Quick Clicks window for the Client file

Figure 30, Additional **Client** file **Manage Quick Clicks** options

The toolbar buttons and right-click menus can be used to access the various tasks in the Manage Quick Clicks window.

## **List Preferences**

 Menu
 Edit | List | List Preferences

 Quick Clicks
 Customize Current View | List Preferences

List Preferences are used to determine the visual settings for the rows displayed on the **List** tab of Editor windows for PracticeMaster files (*Figure 31*). You can use the List Preferences program to specify row height and color. List preferences are edited on a per-user, per-file basis. In other words, user Cathy can maintain her own set of list preferences separate from user Jim. Cathy can also have a different set of list preferences in the Client file than she does in the Fee file.

Row 2 Color	Sample Text 🔹	
	Reset to Defaults	

Figure 31, List Preferences window

### Preferences for the List Tab

List preferences for PracticeMaster file lists can be customized as follows.

Show Grid Lines	When this option is selected, horizontal rows and vertical columns will be separated by grid lines. When this option is cleared, there will be no separator between cells.
Row Height	This field determines the height of each row and how text will wrap. The default value is 1 line; this can be changed to up to 4 lines.
Row 1/Row 2 Color	These fields allow you to use color for visual separation of each row. Clicking the drop-down arrow will open a <b>Select</b> <b>Colors</b> window from which you can choose the desired text color and background color. PracticeMaster assigns default color settings for each file. For example, the Fee file uses alternating blue and white rows.

In the following figures, the Fee file has been customized to use different numbers of lines, different colors, and different grid line settings. As you can see, the List Preferences offer a great deal of flexibility for optimizing the appearance of your data.

### List Preferences for PracticeMaster Matter Manager

# Menu (From Matter Manager) Edit | List | List Preferences Quick Clicks (From Matter Manager) Customize Current View (List Preferences)

The Matter Manager program displays matter-specific information in one easy-to-navigate window (*Figure 34*). Like the PracticeMaster files, the record list can be customized. However, list preferences for the Matter Manager differ slightly from the preferences you can specify for PracticeMaster files. The **Row 1/Row 2 Color** and **Show Grid Lines** options are the same; however, there is an additional option for displaying records based on record type (*Figure 35*).

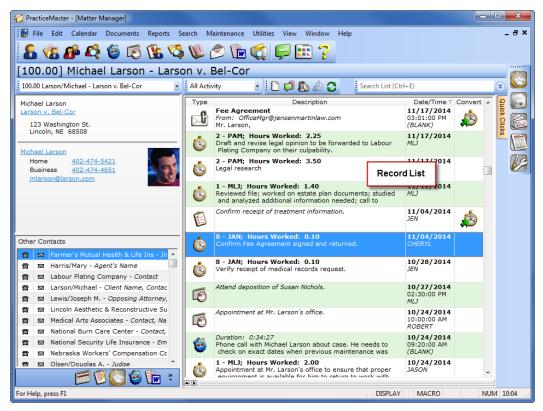

Figure 34, Matter Manager

Figure 35, List Preferences window for Matter Manager

#### Define row colors by record type

Preferences

When this option is selected, you can use the **Select Colors** button to open the Record Colors window and define the text and background color for each record type (*Figure 36*). For example, when displaying the **All Activity** view, you can show fees in one color and journal records in another color (*Figure 37*).

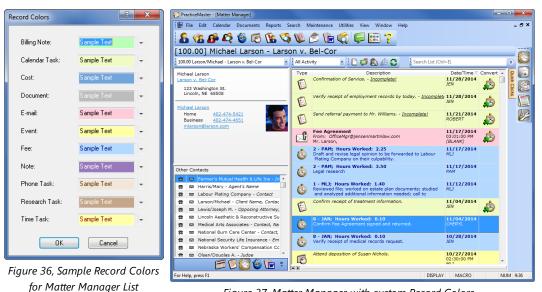

Figure 37, Matter Manager with custom Record Colors

## **Column Layouts**

A column layout is used to determine the columns that are shown in an Editor window for a file as well as the order of the columns. Column layouts are selected on the Quick Clicks pane when viewing the **List** tab of the Editor window.

PracticeMaster - Client  File Edit Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance Utilities View Window Help  Solver Calendar Documents Reports Search Maintenance View Calendar Documents Reports Search Maintenance View View View Window Help  Solver Calendar Documents Reports Search Maintenance View View View View View View View Vie

Figure 39, Column Layout Editor

Each column in a column layout represents a field in a file. Column layouts are created and edited via the Column Layout Editor (*Figure 39*). You can access the Column Layout Editor by clicking on the **Manage Column Layouts** option in the **Column Layout** group of the Quick Clicks pane

(Figure 40).

#### To create a column layout

- 1. Open the file for which you want to create a column layout.
- 2. In the Quick Clicks pane, in the Column Layout group, select Manage Column Layouts.
- 3. Click the 4 icon. The Column Layout Editor window will be displayed.
- 4. Enter a name for the column layout in the **Column Layout Name** field.
  - a. Optionally select the **Show for all users** check box. This check box determines whether the column layout will be available for all users or just the user creating the column layout.
  - b. From the **Available Fields** column, select the field you want to display in the column layout and click **Add** >>. (*Note: Alternatively, double-click a field to add it.*)
  - c. Use the **Up** and **Down** buttons to change the order of the fields appearing in the column layout. The order of the fields determines the order of the columns.
- 5. When you have finished adding fields to the column layout, click Save.
- 6. If desired, you can drag and drop the column layout to a different position in the list.

After closing the **Manage Quick Clicks** window, you will see your column layout in the list of available column layouts in the **Quick Clicks** pane. Selecting the column layout will apply the

column layout. The currently selected column layout is indicated by a green check mark ( 🖍 ).

**Tip:** When creating column layouts, consider the fields you search most often when looking up information. These are also the fields that will be searched by default when filtering records using the Search box (*page 46*).

## The Default Column Layout

The **Default** column layout is shown as **(default)** in the Quick Clicks pane. The **Default** column layout includes all fields in a file. The fields are positioned in the order they are used in File Maintenance. The **Default** column layout cannot be edited or deleted.

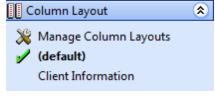

Figure 40, Quick Clicks Column Layout group

### The Restricted Column Layout

The **Restricted** column layout is a special column layout that is used to prevent users without access rights for certain information from seeing that information as part of another column layout. For example, perhaps you have a user who has browse calendar rights but has no rights to the Client file. When the user selects the client lookup button, only the Client ID, Client Name, and Name Search

fields will be shown because those are the fields in the **Restricted** column layout for the Client file. If desired, you can add or change fields in the **Restricted** column layout. You cannot delete the **Restricted** column layout. A list of the default fields for each file can be seen in Help. The fields listed in Help will be used if the Restricted column layout's list of fields is blank.

## **Filtering Data**

PracticeMaster provides powerful tools for filtering data. Filtering makes it easy to find the records you want to see by eliminating records that do not meet the specified criteria. There are several ways to filter records.

### Search Box

The easiest way to filter data in a **List** tab is to use the Search box, which is displayed in the upperright corner of a file's Editor window.

Fo	r Help, press	F1											LIST	MACRO	NUM	9:08

Figure 41, Search box

The Search box can search either all fields displayed in a column layout or search only a specific field.

- To search all fields displayed in a column layout, enter your search term in the **Search List** field.
- To search a specific field, click the 😢 button and enter your search term in the labeled field.

In Figure 41 above, the Client list has been filtered to show only clients with the text "White" appearing somewhere in the column layout.

You can also perform searches for information located in fields that are not part of the current column layout. To do this, you must manually enter the Field ID in the Search box along with the term you want to search. For example, to search the Work Description field when the Work Description is not part of the column layout, enter "Desc:" (without the quotation marks) before the text you want to search for (*Figure 42*).

Figure 42, Example of a search for a field that is not part of the column layout

Tip: More information on the Search box can be found in the *PracticeMaster Search Guide*.

## **Predefined Filters**

There are special filters built into PracticeMaster to make your searches easier. For example, a special List Group is available in the Quick Clicks pane of the Client, Contact, and Timekeeper files. Filters that show all records or only those records that are active are included in this group.

Quick Clicks	д

				Save Cancel				

Figure 44, Filter Editor window

#### ► To create a new filter

- 1. From the Quick Clicks pane, under the Filter group, select Manage Filters.
- 2. Click the  $\frac{1}{2}$  icon.
- 3. Enter the Filter Name by typing over the default text of "New Filter".
- 4. Optionally select the **Show for all users** check box to share the filter with all users.
- 5. Click the **New Row** button.
  - a. Select the desired field from the list.
  - b. Select the **Test Condition** field and select the desired value.
  - c. Select the **Test Value** field and enter the desired value.
- 6. Optionally, click **New Row** and repeat step 5 to add additional conditions to your expression.
- 7. Click Save.
- 8. You can drag and drop the filter to a different position in the list in the **Manage Quick Clicks** window.
- 9. Close the Manage Quick Clicks window.

Once you have created your filter and closed the Manage Quick Clicks window, it will be available for selection in the Quick Clicks pane.

## **Optimizing Filters with Indexes**

You can significantly improve filtering time by creating filters that take advantage of indexes. Indexes are a list of all records in a file that aer sorted by a specific field you have chosen. More information on indexes can be found on page 7. Knowledge Base Article **R11487**, "Working with Indexes, Filters, and QuickViews," provides additional information on the criteria required in order to use an index when filtering.

**More Info:** Additional information on expressions and filters can be found in the PracticeMaster Help and in the following Knowledge Base articles at **support.Tabs3.com**:

- Knowledge Base Article **R11493** "All About Expressions"
- Knowledge Base Article **<u>R11515</u>** "Filter Expression Examples"

# Sort Order

There are two ways to sort the information that appears on the **List** tab. The first is by selecting one of the indexes listed in the **Sort By** group of the Quick Clicks pane (*Figure 45*).

The second way to sort records on the **List** tab is by using the column headers that appear above the record list. Clicking a column header for which no index is defined in the **Sort By** group will create a temporary index. Temporary indexes are displayed in the **Sort By** group with an asterisk in front of the field name. The field being sorted on will display an ascending sort indicator ( $\triangleq$ ) in the column header. Clicking again will change the sort to display in descending order ( $\overline{\)}$ ).

Figure 45 shows a temporary index on the **Full Name** field in the Client file. This index sorts clients in alphabetical order based on the value entered in the **Full Name** field, as shown in Figure 46.

If you find that you are often sorting on a field that creates a temporary index, you will probably want to create a permanent index for that field. Step-by-step instructions on creating a new index can be found on page 7. Knowledge Base Article **R11487**, "Working with Indexes, Filters, and QuickViews," also provides detailed information regarding temporary and permanent indexes.

## **QuickViews and Smart tabs**

QuickViews are a powerful feature in PracticeMaster. QuickViews combine a filter, column layout, and sort option into a single tab at the top of the **List** tab.

QuickViews can also include Smart tabs at the bottom of the **List** tab. Smart tabs further sort records into groups based on the selected indexed field.

Figure 48, QuickView Editor

#### ► To create a new QuickView

- 1. From the **Quick Clicks** pane, under the **QuickViews** group, select **Manage QuickViews**.
- 2. Click  $\stackrel{\text{L}}{\leftarrow}$  to add a new QuickView.
  - a. Enter the **QuickView Name** by typing over the default text of "New QuickView".
  - b. Optionally select the **Show for all users** check box to share the QuickView with all users.
  - c. Select a **Filter**, **Column Layout**, and **Default Sort** for this QuickView. (*Tip: You can* select a Filter and a Column Layout before creating your new QuickView to automate your selection process.)
  - d. Optionally select to **Use Custom Colors** and choose the desired color scheme. This will set the color of the QuickView tab and Smart tabs.
  - e. Optionally select to **Show as QuickView tab**. If selected, the tab will always be included at the top of the List window. If cleared, the QuickView will appear in the Quick Clicks, but will only show a QuickView tab while active.
  - f. Optionally select to **Show Smart tabs** and choose which indexed field to use for these tabs. Smart tabs show filtered results based on the specifed field.
- 3. Click **Save** to save the QuickView.
- 4. You can drag and drop the QuickView to a different position on the list.
- 5. Close the Manage Quick Clicks window.

QuickViews are user-specific and can be configured to show for all users if desired.

**Tip:** We strongly recommend you take some time to explore QuickViews. The time spent learning and implementing QuickViews can save you and others in your firm a great deal of time by optimizing your lookup windows, thus allowing you to quickly find the information you need.

**More Info:** Additional information on QuickViews can be found in PracticeMaster Help, the *Using Quick Clicks* **Training Video**, and in the following Knowledge Base articles at **support.Tabs3.com**.

Knowledge Base Article **<u>R11607</u>** - "QuickViews Included in PracticeMaster"

Knowledge Base Article R11487 - "Working with Indexes, Filters, and QuickViews"

## Calendar

Calendaring is a critical function in every law office because it allows members of the staff to quickly locate other members of the office while also keeping track of their own schedules and client deadlines. Many firms assign one or more employees the task of scheduling tasks, appointments, and other events on behalf of other members of the firm.

The following section will cover basic information about the Graphical Calendar as well as the process of configuring calendar rights, calendar properties, and Calendar Plan Templates. Information on synchronization with Microsoft Outlook can be found on .

### **Calendar Program**

The Calendar program allows you to display calendar records in a daily, weekly or monthly calendar format. Figure 49 displays the Daily Calendar. The Calendar window includes a toolbar as well as three areas including the Event Calendar, Date Selector, and the Task List.

## **Calendar Rights**

Menu

File | Open | Users | Calendar Rights

By default, any user can view other users' public calendar entries, but rights must be explicitly given to edit other users' public entries, view private entries, and edit private entries. Users are granted access rights to edit public and private calendars for other users in the **User Configuration** window of the System Configuration program. A Manager can access this window to grant rights to allow a user to edit other users' calendars and vice versa. Additionally, users can grant rights to their calendar entries provided they belong to an access profile that allows access to the **User Configuration** program.

The following figures display both the **Rights to This Calendar** and the **Rights to Other Calendars** tabs for user Cathy. The check marks on each list represent which users have the right to browse and/or edit her public and private calendar entries (*Figure 50*) and whether she can browse and/or edit other users' calendar entries (*Figure 51*).

Figure 50, Calendar Access Rights -**Rights to This Calendar** tab Figure 51, Calendar Access Rights -Rights to Other Calendars tab

**More Info:** Additional information regarding access rights and step-by-step procedures for modifying calendar rights can be found in the *Administrator Guide* and System Configuration Help.

## **Calendar Properties**

MenuCalendar | Calendar PropertiesTask FoldersCalendar | Calendar Properties

The Calendar Properties program allows each user to configure what information will be shown in the Graphical Calendars and how it will be displayed. For example, each user can specify how the colors of the events will be displayed on the Graphical Calendars as well as the number of minutes between refreshes.

The Calendar Properties program is divided into five tabs: **General**, **Daily**, **Weekly**, **Monthly**, and **Task List**. Each tab corresponds to the section of the calendar being customized.

The majority of the options in the Calendar Properties program are self-explanatory. This section will discuss those items that are not self-explanatory in more detail.

**More Info:** Detailed information on each field in the Calendar Properties window can be found in PracticeMaster Help.

Figure 56, Calendar Properties - Task List tab

### **General Tab**

The **General** tab (*Figure 52*) allows you to specify various settings for all Calendar programs (i.e., Daily Calendar, Weekly Calendar, Monthly Calendar, and Task List program).

### **Display Fields**

The **Display Fields** section is used to select which fields will display on the Event Calendar of the Calendar program and the Graphical Calendar Report. You can designate whether you want am/pm shown and which separator to use between the displayed fields. Clicking the **Select Fields** button will open a **Select Display Fields** window (*Figure 58*), allowing you to designate which fields will be displayed.

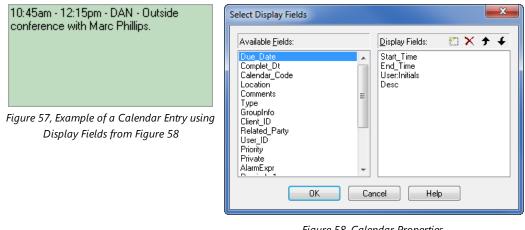

Figure 58, Calendar Properties, **Select Display Fields** window

The same calendar entry can be configured to display differently depending on the fields selected. The **Separate fields with** option on the **General** tab allows you to select one of five separators to distinguish between individual fields. Figure 57 uses the Hyphen separator, whereas Figure 59 uses the Semicolon separator.

Figure 60, Calendar Properties, Select Display Fields window

#### ► To add a field from the list of Available Fields to the Display Fields column

 From the Available Fields column of the Select Display Fields window, select the field and click the column in the Display Fields column.

- 2. Use the **f** and **f** icons to rearrange the order of fields in the **Display Fields** column.
- 3. To remove a field from the **Display Fields** column, click the 🔀 icon.

### **Event Colors**

The **Event Colors** section allows each user to specify what colors PracticeMaster uses to display event and task calendar records in the Calendar window or on the Graphical Calendar Report. There are three options to choose from:

- Event Colors are based on User ID information: When this option is selected, PracticeMaster displays calendar entries based on the Colors used for PracticeMaster Calendar entries setting found in the User Configuration program in System Configuration (*Figure 61*).
- Event Colors are based on Calendar Code information: When this option is selected, PracticeMaster displays calendar entries based on the colors specified in the **Text Color** field of the **Calendar Code** window (*Figure 62*).
- Use default colors for all events: When this option is selected, all calendar events will be displayed using the text and background color defined in the **Default Event Color** field.

## Task List

The **Task List** tab (*Figure 56*) allows you to customize the Task List in the Calendar program and in the Task List program.

### **Column Layout**

The **Column Layout** field allows each user to select which column layout to use when viewing the Task List in the Calendar program or the Task List program. The Task List program does not use the Quick Clicks pane; therefore, the only way to change the column layout is via the **Task List** tab of Calendar Properties.

### Index to Use for Sorting

The **Index to use for Sorting** field is used to specify how tasks are sorted in the Task List in the Calendar program and in the Task List program. By default, this field is set to use the **Tasks Only** index. You can also assign a user-defined index to use for sorting; however, this index must use the following sort orders in order to be shown in the drop-down list.

- Type
- User ID
- Complete\_Dt
- One additional field

# **Calendar Plans & Calendar Plan Templates**

 Menu
 Calendar | Calendar Plan Templates

 Task Folders
 Calendar | Calendar Plan Templates

A Calendar Plan Template consists of a predefined group of interrelated dates that apply to a particular type of job, filing deadline, etc. Once a Calendar Plan Template has been defined, it can be used over and over again to automatically generate a Calendar Plan. A Calendar Plan consists of a defined set of calendar items based on a specific date entered by the user at the time that a Calendar Plan Template is run.

🗸 Calendar Plan Templates

Figure 63, Calendar Plan Templates window

### **Creating a Calendar Plan Template**

All Calendar Plan Templates begin with a Key item. A Key item is the base item or "root" for any additional calendar items. The first link to a Key item is called a dependent item. These are items whose date is determined by the date of a Key item or another calendar item. For example, a Key item would be the opening of a Workers' Compensation case, while the dependent item would be the filing of a claim with the Workers' Compensation Court. The date of the claim depends on the date that the case is opened.

After adding a dependent item, you can continue adding related calendar items that link to the Key item and Dependent items. These are known as Sibling and Secondary items.

Calendar records can be assigned to more than one user or group. Variables can be used allowing the user to specify unique text for designated calendar records when the Calendar Plan Template is generated.

More Info: Additional information on how to use variables can be found in PracticeMaster Help.

#### ► To add a Calendar Plan Template

- 1. From the Calendar menu, select Calendar Plan Templates.
- 2. From the **Calendar Plan Template List**, right-click an Area of Practice and select **Add New Plan Template**.
- 3. A new branch will be displayed under the Area of Practice with "new template" highlighted.
  - a. Type the Calendar Plan Template name over "new template".
  - b. Press the Tab key.
- 4. In the **Description** field of the Template Information section, enter the description for the Calendar Plan Template.
  - Press the Tab key.
- 5. In the **Venue** field, select the Venue to be used for the Calendar Plan Template.
- 6. Under the **Template Items** pane, right-click the Key item and select **Rename** to label the Key item for the Calendar Plan Template.
  - Press the Enter key.
- 7. Specify the settings for the Key item in the **Item Detail** section.
- 8. When the Key item is selected, add a Dependent item by right-clicking the Key item and selecting **Add Dependent Item**.
- 9. A new branch will be displayed under the Key item with "new item" highlighted. Type the template item name over "new item".
  - Press the Enter key.
- 10. Specify the settings for the new item in the **Item Detail** section.
- 11. Continue to add Dependent items or Sibling items by right-clicking the template item it is dependent on or related to and selecting **Add Dependent Item** or **Add Sibling Item** until the template is complete.
- 12. When completed, press Ctrl+S to save the Calendar Plan Template.
- 13. Click **Close** to exit the Calendar Plan Templates window.

### **Generating a Calendar Plan**

Once you have created a Calendar Plan Template, you can generate a Calendar Plan from the template.

#### **>** To generate a Calendar Plan from a Calendar Plan Template

- 1. From the Calendar menu, select Calendar Plan Templates.
- 2. From the Calendar Plan Template List, click the plus (+) sign next to the Area of Practice to which the Calendar Plan Template is assigned.
- 3. Highlight the Calendar Plan Template to be processed.
- 4. Click the **Process Template** button.
- 5. In the **Process Template** window, specify a **Plan name** and make any changes to the remaining fields in the Process Template window.
- 6. Click **OK**.

- 7. If a template item requires additional information, the **Calendar File** window will be displayed. Add the information and close the **Calendar File** window.
- 8. Once the Calendar Plan is generated, a **Preview of Plan** window will be displayed. To accept the plan, click the **Accept Plan** button.
- 9. In the Calendar Plan Templates window, click Close.

## Calendar Plan Templates and WorkFlows

Calendar Plan Templates can also be processed as part of a WorkFlow (*page 75*). For example, suppose you have created a WorkFlow on the Client file to run when the **Statue of Limitations** field is populated with a date. You can configure a WorkFlow action to process the Statute of Limitations Calendar Plan Template as part of the WorkFlow. The Calendar Plan Template then creates your standard series of reminders. You can even have different Statute of Limitations WorkFlows for different types of matters.

**More Info:** Additional information on Calendar Plans and Calendar Plan Templates can be found in PracticeMaster Help.

# **Outlook® Synchronization**

 Menu
 Maintenance | Integration | Outlook Synchronization

 Task Folders
 Integration | Outlook Synchronization

PracticeMaster has the ability to synchronize calendar and contact records with Microsoft® Outlook. Records added in PracticeMaster can synchronize to Outlook; likewise, records added in Outlook can synchronize to PracticeMaster. This powerful integration is primarily maintenance-free once set up. PracticeMaster stores all of your client and case information. Integrating your PracticeMaster contacts and calendar with Outlook makes it easy for you to take your current calendar and contact list with you in Outlook, as well as synchronize it to your smartphone.

Full details on the integration between PracticeMaster and Outlook can be found in the **Outlook** *Integration Guide*.

# **Conflict of Interest Searching**

PracticeMaster includes powerful conflict searching capabilities. The *PracticeMaster Search Guide* includes complete details regarding conflict searching. However, this section of the *Customizing PracticeMaster Guide* summarizes the areas that can be customized.

There are two areas of conflict searching that you can customize:

- Fields to search
- Fields to print on the Conflict of Interest Report

Both of these areas are configured in File Maintenance (*Maintenance* | *File Maintenance*) as shown in Figure 64.

File Definition - System Files	
Main       Field       Index       Ut         Field IDs <ul> <li>Field IDs</li> <li>Field</li> </ul> <ul> <li>Field IDs</li> <li>Field</li> <li>Field IDs</li> <li>Field</li> </ul> <ul> <li>Field IDs</li> </ul> <ul> <li>Field IDs</li> </ul> <li>Field IDs</li>	Rield Type: Vitual Vitual Protected Field Name: E-mail Address Help Text: Custom Properties V Include on Conflict Report V Include in Conflict Search V Include in Conflict Search V Enhanced Vitual Field
	Done Cancel

Figure 64, File Maintenance **Field** tab

The three properties that relate to conflict searching as shown in Figure 64 are **Include on Conflict Report**, **Include in Conflict Search**, and **Include in Contact Search**.

Include on Conflict Report	The <b>Include on Conflict Report</b> option allows you to select which fields will be displayed when a Conflict of Interest Report is printed or previewed. Fields that are configured to display on the Conflict of Interest Report will also display on the Document Search Report.					
	This option is useful for providing additional information about a record where a conflict was found. For example, if a conflict is found in the Client file, you may want to include the <b>Date Closed</b> on the Conflict of Interest Report. These fields can be included on the report for informational purposes in order to help you evaluate the significance of the conflict.					
Include in Conflict Search	The <b>Include in Conflict Search</b> option allows you to choose whether or not a field will be searched when Conflict of Interest searches are run.					
Include in Contact Search	The <b>Include in Contact Search</b> option allows you to choose whether or not a field will be searched when contact searches are run. The Contact Search is intended to search a more limited group than the Conflict of Interest Search. All items included in the Contact Search are automatically a part of the Conflict of Interest Search.					

After you have configured the fields that you want to include in the Conflict Search and on the Conflict Report, an initial rebuilding of the Conflict of Interest index file is required in order to include previously entered information in those fields.

#### • To rebuild the Conflict of Interest index files

- 1. From the Search menu, select Search Settings.
- 2. On the **Rebuild Index** tab, select the **Conflict/Contact Index** check box.
- 3. Click the **Rebuild Now** button to begin the rebuild process.
- 4. Upon completion, a window will be displayed indicating that the task completed successfully. Click **OK**.
- 5. Click **OK** to close the **Search Settings** window.

Once rebuilding is complete, you are ready to run a conflict or contact search. Items that have been included in the Conflict Search and on the Conflict Report will be displayed as "hits" on the Conflict of Interest Report. Figure 65

Figure 65, Conflict of Interest Report

### **Reviewing Which Fields are Conflict Checked**

By default, the files provided with PracticeMaster are configured to include conflict searching on the pertinent fields. However, we recommend that you review which fields are being searched in each data file. An easy way to systematically review which fields are being searched is to print out File Definitions for each file.

#### ► To print all File Definitions for All System Files

- 1. From the Maintenance Task Folder, select File Maintenance.
- 2. Right-click System Files.
- 3. Select Print File Definitions for All System Files.

#### ► To print a single File Definition

- 1. From the **Reports** Task Folder, select **File Definition Report**.
- 2. Select the desired file and click **OK**.

Figure 66 is an example of a printed File Definition.

Figure 66, Example of a File Definition Report

The **Cnflt** and **Rep** columns on the File Definition report indicate how the fields are configured for conflict searching.

• The **Cnflt** column includes a **Y** or an **N** for each field in the file. A **Y** indicates the file is configured to be included in conflict searches, whereas an N indicates the field is configured to not be included in conflict searches. An asterisk (\*) indicates the field is configured to be included in contact searches. A plus sign "+" indicates the field will be printed on the conflict report and contact report.

**More Info:** Additional information on the Conflict of Interest search can be found in Knowledge Base Article **R11445**, "Using the PracticeMaster Conflict of Interest Search," and in the *Conflict of Interest* Training Video at **Tabs3.com/trainingvideo/v17/pmvideo.html**.

### **Convert to Fee Settings**

#### Menu Maintenance | Preferences | Convert to Fee Settings

The Convert to Fee program is a useful tool that makes it easy to create fees from existing calendar records, document management records, and journal records, which includes e-mail, notes, phone, research, and timer records. You can convert an item by right-clicking it and selecting **Convert to Fee** from the **Action** menu option. If using Tabs3 Billing software, fees are automatically sent to Tabs3 for billing purposes.

You can set default preferences for converting records to fees using the Convert to Fee Settings window. These settings are user-specific, meaning that users can configure their settings to suit their own needs.

#### To define default Convert to Fee Settings

- 1. From the **Maintenance** menu in PracticeMaster, point to **Preferences** and select **Convert to Fee Settings**.
- 2. Define the default settings for the record type as follows:
  - a. Click the corresponding tab for the desired record type (e.g., Calendar).
  - b. Define the settings for that record type.
  - c. Repeat steps a and b for each record type.
- 3. Click **OK** to close the window.

The Convert to Fee Settings program is made up of seven tabs. Each tab includes settings specific to the type of record being converted to a fee.

### **Task Folders**

Task Folders are used to navigate the software. Each tab in the Task Folders window represents a specific area of the software. The following three Task Folders in PracticeMaster can be customized for each user:

- Main Task Folder
- Reports Task Folder
- Files Task Folder

### Main Task Folder

Upon opening PracticeMaster, the **Main** Task Folder is displayed. You can customize the **Main** Task Folder to include the most frequently used PracticeMaster programs. Figure 74 shows the **Main** Task Folder as provided out of the box, whereas Figure 75 shows an example of a customized **Main** Task Folder.

Figure 74, Default Main Task Folder

Figure 75, Example of a customized Main Task Folder

#### ▶ To customize the Main Task Folder

- 1. From the PracticeMaster **Main** Task Folder, click the **Customize** option in the lower-right corner.
- 2. Click the icon you want to change.
  - a. The Main Task Folder Customization window will be shown (Figure 76).
  - b. Select the item you want shown in that position.
  - c. Click OK.
- 3. Repeat step 2 for any other icons you want to change.
  - a. To remove an icon, select the Not Assigned option from the top of the list.
- 4. When finished customizing the various icon positions, click the **Run** option in the lower-right corner.
  - Click **Yes** to confirm you want to save the changes.

Each user can customize their own icons.

Menu	Description	
	Not Assigned (choose this to remove button)	
File	Back Up Data Files (Ctrl+Shift+B)	
File	Calendar Code File	
File	Category File	
File	Client File (Ctrl+Shift+C)	
File	Matter Manager (Ctrl+M)	
File	Contact File (Ctrl+Shift+P)	
File	Process Timer Records	
File	Cost File (Ctrl+Shift+O)

File	E-mail (Ctrl+F8)	
File	eNote List	
File	File Fee File (Ctrl+Shift+F)	
File	File Journal File (Ctrl+Shift+J)	
File	Location File	
File	Other Files (Ctrl+O)	
File	Outlook Sync Log	
File	Restore Data Files (Ctrl+Shift+S)	
	OK Cancel Reset Help	

Figure 76, Partial list of icons that can be added to the **Main** Task Folder

**Note:** Task Folder customization settings are saved to the User Profile and will travel with the user regardless of the workstation being used.

PracticeMaster includes a Task Bar, as shown in Figure 77. This Task Bar mirrors the icons for the programs you choose to display on the **Main** Task Folder.

Figure 77, Main Task Folder icons reflect buttons on Task Bar

### **Reports Task Folder**

Main Client	Calendar Documents			ntenance
Setup	Repo	JILS	Files	
Ĩ		<b>L</b>	Ę	
Report Writer	Conflict Search	Contact Search	Docur Sear	
				à
Client Summary Report	Daily Report	Graphical Calendar Report	Graph Task List	⊅ ical Report
File Definition Report	Client Inactivity Report			

You can customize the **Reports** Task Folder to display icons for the reports you use most frequently.

Figure 78, Default **Reports** Task Folder

Name	Description		OK

Figure 79, Select Custom Report window

The process of adding an icon to the **Reports** Task Folder is the same as adding an icon to the **Main** Task Folder. The **Select Custom Report** window (*Figure 79*) will be displayed upon clicking an icon to customize.

The list of available reports will vary depending on the reports available in the Report Writer program.

**Note:** Reports with \*\*\*\*\*\* in the Name column *(not shown)* are standard reports and are not customizable using the PracticeMaster Report Writer.

### **Files Task Folder**

You can also customize the Files Task Folder to display icons for the files you access most frequently.

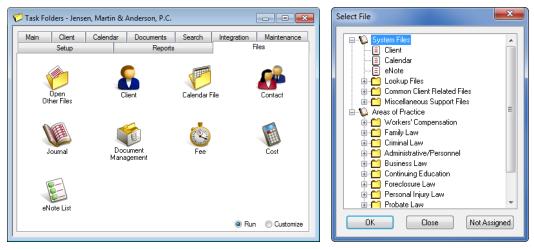

Figure 80, Default **Files** Task Folder

Figure 81, Select File window

The **Files** Task Folder can be customized using the same steps to customize the **Main** and **Reports** Task Folders. The **Select File** window (*Figure 81*) will be displayed upon clicking an icon to customize.

### **Other Areas to Customize**

The following section includes information on customization settings for functions that are used on a day-to-day basis.

### **History Tracking**

The History Tracking feature allows users to track all additions and changes made to specific fields in a file.

In order to begin using History Tracking, the feature must be enabled in PracticeMaster Customization (*Utilities* | *Customization*). You can also specify a maximum size to use for the history file.

Once history tracking has been enabled at the firm level, you can configure individual fields to use History Tracking. This option appears as a check box on the **Field** tab of the File Maintenance window (*page 4*).

You can view history for a record by selecting the record and clicking the **Display History** option in the **Take Action** section of the Quick Clicks pane, or by right-clicking the record, pointing to **Action**, and selecting **Display History**.

Figure 84, **Record History** window

**Note:** Additional information regarding configuring History Tracking for the firm and for individual fields can be found in the *Administrator Guide* and PracticeMaster Help.

#### **E-Mail Preferences**

#### Menu Maintenance | Preferences | E-mail Preferences

The E-mail Preferences window is used to configure e-mail integration between PracticeMaster and MAPI e-mail software such as Microsoft Outlook. These settings are stored separately in the User Profile for each User ID.

E-Mail Preferences
Options
Allow HTML when viewing/replying to E-mail Journal records
Automatically download images from the Internet
Allow scripts to run
Use Enhanced E-mail View for Journal SnapShot
Allow unsafe attachments to be opened
Include original e-mail text when replying
OK Cancel

Figure 85, E-Mail Preferences window

Allow HTML when viewing/replying to E-mail Journal records When this check box is selected, PracticeMaster will be able to view and send HTML formatted e-mails. This means that PracticeMaster will use the Web browser capabilities of Microsoft Internet Explorer to view and send HTML e-mail without having to open a Web browser. When this check box is cleared, you will not be able to view or send HTML e-mail via PracticeMaster.

**Note:** Selecting this check box will display a **Confirmation Required** window, which is displayed to make the user aware that if this option is selected, PracticeMaster has no control over what happens when PracticeMaster uses the Web browser capabilities of Microsoft Internet Explorer. For security reasons, you may want to leave this option disabled.

This check box (which is only available when **Allow HTML** when viewing/replying to E-mail Journal records is selected) controls whether images that are linked to an email are automatically downloaded when the e-mail is viewed. If this check box is cleared, a or symbol will appear in place of the embedded image.

# Automatically download images from the Internet

Allow scripts to run	This check box (which is only available when <b>Allow HTML</b> when viewing/replying to E-mail Journal records is selected) allows active content sent via e-mail to execute when an e-mail is viewed. When this check box is cleared, scripts embedded in an e-mail will not be allowed to execute.
Use Enhanced E-Mail View for Journal SnapShot	This check box (which is only available when <b>Allow HTML</b> when viewing/replying to E-mail Journal records is selected) determines whether e-mails will be displayed using Plain Text or Enhanced E-Mail View when viewing the Journal record in the SnapShot.
	<b>Note:</b> While this check box determines whether a SnapShot will display in Enhanced E-Mail View or Plain Text by default, you can toggle between these options for individual records by using the right-click menu options in the SnapShot or by pressing Ctrl+F1.
Allow unsafe attachments to be opened	When this check box is selected, opening an attachment with a file extension that is considered unsafe displays a message asking you to confirm that you want to open the attachment. When this check box is cleared, attempting to open a file with an extension that is considered unsafe will display a message indicating that the file cannot be opened.
	<b>Caution:</b> Some e-mail software, including Outlook, prohibits unsafe attachments from being opened. Be aware that PracticeMaster can be configured to allow unsafe attachments to be opened even though the e-mail software does not.
	<b>Caution:</b> If you decide to open e-mail attachments, be aware that PracticeMaster has no control over what happens after the attachment is opened. All attachments should be scanned for viruses prior to opening.
Include original e-mail text when replying	When this check box is selected, the original e-mail text will be included when you reply to an e-mail. When this check box is cleared, replies will not contain the original e- mail text.

#### **Matter Manager**

The Matter Manager can be customized for each user to include the client-specific functions used most frequently.

#### **Custom Activity Lists**

Along with the record lists already available in the Matter Manager, you can create Custom Activity Lists to display the record types you access most often. You can load a Custom Activity List by rightclicking anywhere in the Record List and selecting **Custom Activity List**, or by selecting the desired list from the drop-down menu at the top of the Matter Manager.

#### **Custom Taskbar**

The Custom Taskbar, located at the bottom left of the Matter Manager, can be configured to include common actions that can be performed from the Matter Manager window. When appropriate, such as for reports, the program will be restricted to the currently selected client by default.

**More Info:** Additional information on the Matter Manager, such as instructions on setting up new Custom Activity Lists, can be found in the *Matter Manager Quick Guide*.

### **Timer Preferences & Visual Timer Display Properties**

PracticeMaster Timer Preferences
Preferences
Automatically start timer upon creation of these tasks:

**More Info:** Additional information regarding the Visual Timer Display Properties fields can be found in PracticeMaster Help.

#### **eNote Preferences**

Firms running the Platinum version of the PracticeMaster software have access to eNote, an intra-office messaging system that makes it easy to send and receive quick messages to and from other PracticeMaster users. You can also use eNote to send co-workers links to appointments, documents, journal records and more for quick reference.

The eNote Preferences window is used to configure various eNote settings, such as whether eNote is enabled at PracticeMaster startup, always on top of current tasks, minimized after the last eNote is dismissed, and more.

eNote Preferences	? ×
Disable eNote at PracticeMaster startup     Always on Top     Minimize to tray when last eNote is dismissed     Sending	
Include original eNote when replying	
☑ Save sent eNotes	
Receiving           Pap up for new eNotes           Balloon for new eNotes           Automatically show newest eNote           Play sound for new eNotes	
C:\Windows\Media\chimes.wav	<b>2</b>
	OK Cancel

Figure 88, eNote Preferences window

Several of the available options are self-explanatory. Options that require a more detailed explanation are discussed below.

Disable eNote at PracticeMaster startup	When this check box is selected, the eNote program will not open automatically when PracticeMaster is started. Your user status will appear Offline to other users until you manually open the eNote window (via <i>File</i>   <i>Open</i>   <i>eNote</i> or <i>Ctrl+E</i> ).
	<b>Note:</b> Selecting this preference is the only way to disable eNotes for Manager users.
Always on Top	When this check box is selected, eNotes will always display on top of all other open windows on the desktop unless they are manually minimized.
Minimize to Tray when last eNote is dismissed	When this check box is selected, the eNote window will return to the Windows system tray when the last unread eNote is dismissed.

**More Info:** Additional information regarding eNote can be found in the *eNote***Training Video** and in Knowledge Base article **R11246**, "PracticeMaster eNote Frequently Asked Questions".

# Part 3 - Focus Areas

Part 3 of the *Customizing PracticeMaster Guide* introduces the features that do not necessarily need to be implemented before you can begin using PracticeMaster, and can instead be introduced as you see fit.

The content covered in this section includes:

- An introduction to PracticeMaster Document Management
- Information on the options available for performing document assembly
- An introduction to the PracticeMaster Report Writer program

### **Document Management**

PracticeMaster's Document Management feature makes it easy to store, organize, and access documents from other programs within PracticeMaster. With it, you can specify a single location in which to store documents. You can then automatically name and save documents to this location according to a naming scheme specified by the firm. This prevents documents from becoming "lost in the shuffle" or from being saved to a location that all users can't access. At the same time, PracticeMaster's flexibility allows you to save individual documents to a location you specify outside of the location to which firm-related documents are stored.

Documents can be saved to PracticeMaster from several programs, including Microsoft® Word®, Excel®, and PowerPoint®, Adobe® Acrobat® and Reader®, and Corel® WordPerfect®, via the use of PracticeMaster toolbars designed for each program.

A visual walk-through of the document management process can be found in the *Getting Started* with Document Management and Document Management <u>Training Videos</u>. The **Document Management Guide** contains full details on the Document Management program.

### **Document Assembly**

PracticeMaster offers two document assembly options: Word Document Assembly and HotDocs Document Assembly.

HotDocs Document Assembly HotDocs Document Assembly requires HotDocs® document assembly software. You can use either Corel	Word Document Assembly	Microsoft <sup>®</sup> Word Document Assembly is built into PracticeMaster and requires no additional software other than Word.
WordPerfect® or Microsoft Word with HotDocs.	HotDocs Document Assembly	document assembly software. You can use either Corel

**Tip:** Current information regarding which versions of HotDocs integrate with PracticeMaster can be found in Knowledge Base article **R11530**, "Third Party Integration Requirements."

#### **Overview**

PracticeMaster's powerful document assembly features let you convert your most frequently used documents into templates. These templates contain variables that represent the information that can change each time the document is assembled, such as the matter's work description. When documents are assembled, the variables retrieve information from the PracticeMaster data files. If the information is not present, document assembly will pause and ask the user to enter the required information. This information is then saved to the document and PracticeMaster simultaneously.

Document assembly is also capable of writing information back to PracticeMaster data files. By inserting "ticklers" into your documents, you can automatically create a calendar entry and generate fee or cost entries.

Document Assembly allows you to include additional files or templates in a document template, making it easy to build a document library.

### Word Document Assembly

PracticeMaster has its own document assembly engine that was written specifically to integrate with Microsoft Word. Specially coded document templates in Word are used to merge information from your PracticeMaster data files to create draft documents.

Before documents can be assembled, a document template must be created. Once a document template has been created and saved, you can use the Document Assembly program to assemble a document within Word. Word will remain open when document assembly is completed, allowing you to edit, save, and print the document as required.

You must install the Microsoft Word Document Assembly Plug-in in order to create and assemble Word document templates.

#### To install the Document Assembly Toolbar Plug-in

- 1. Make sure that Microsoft Word is closed.
- 2. Open PracticeMaster.
- 3. From the Integration tab, select Toolbar Plug-ins.
- 4. Click the **Word** tab.
  - a. Click the Install Assembly Plug-in button.
  - b. A message will appear indicating that the Plug-in has been installed. Click **OK** to close the message.
  - c. Click **OK** to close the Toolbar Plug-ins window.

Each user that will be creating templates must install the Word Document Assembly Toolbar Plug-in. Installing the Toolbar Plug-in will copy the necessary files for assembling documents from the PracticeMaster current working directory to your local computer. Once this is done, you can begin creating document templates. Knowledge Base Article **R11447**, "Working with PracticeMaster Document Assembly," contains step-by-step instructions for converting a commonly used form letter to a document assembly template.

**More Info:** Additional information regarding Word Document Assembly can be found in the following Knowledge Base articles at **support.Tabs3.com**.

- Knowledge Base Article R11015 "How To Start a New Word Document Template"
- Knowledge Base Article **R10667** "Word Document Assembly Advanced Coding Tips"

The Word Document Assembly Overview and Word Document Assembly Coding Training Videos at tabs3.com/trainingvideo/v17/pmvideo.html offer a visual walk-through of the Document Assembly process and template coding process.

### **HotDocs Document Assembly**

PracticeMaster can also integrate with HotDocs, a third-party document assembly software program that works inside your Windows word processor. You can use HotDocs to convert the documents you use most frequently into templates. These templates are then used to automatically produce customized documents for a client. When PracticeMaster is integrated with HotDocs, the templates retrieve data from PracticeMaster data files, further automating the assembly process.

There are two different interfaces available for assembling documents via HotDocs.

HotDocs Library Interface	Documents are selected in HotDocs via a HotDocs window with special PracticeMaster menu options in the menu bar and right-click menu options.
PracticeMaster Interface	Documents are selected via a HotDocs Assembly window in PracticeMaster.

**More Info:** Additional information on HotDocs Document Assembly (including instructions on creating HotDocs templates and the document assembly process) can be found in the PracticeMaster Help.

## **Report Writer**

PracticeMaster Report Writer is a powerful utility which allows you to create customized reports for any information stored in PracticeMaster. PracticeMaster provides you with a group of core reports which are referred to as system reports.

**More Info:** Additional information regarding Report Writer can be found in the *PracticeMaster Report Writer Guide*, the *Custom Report Writer* <u>Training Video</u>, and in the following Knowledge Base articles at <u>support.Tabs3.com</u>.

- Knowledge Base Article **R11446** "Working with PracticeMaster Report Writer"
- Knowledge Base Article R10931 " PracticeMaster Report Writer Frequently Asked Questions"

# Resources

There are many resources available to help you learn and use the software.

# **Guides & Quick Guides**

There are multiple guides installed with the software. Select *Help* | *Documentation* for a list of all available resources. The guides can also be accessed on our Web site at:

#### Tabs3.com/support/docs.html

## **Sample Reports**

Sample report packs are available for all software. These report packs include examples of each report in the software and include detailed information regarding each item on the report. Select *Help | Documentation* for a list of all available resources. The sample reports can also be accessed via our Web site at:

Tabs3.com/support/docs.html

# **Training Videos**

Training videos are multimedia resources that walk you through Tabs3 Billing and PracticeMaster features. Select *Help* | *Training Videos* to access the training video libraries. The training videos can also be accessed via our Web site at:

Tabs3.com/videos

## Knowledge Base

The Knowledge Base includes information regarding Tabs3 software products and is provided for resellers, consultants, end-users and other third parties who work with Tabs3 software. It contains extensive information on Error Troubleshooting, Networking & Windows Issues, "How To" articles and product-related articles. The Knowledge Base requires Internet access. Select *Help | Internet Resources | Knowledge Base* to access the Knowledge Base. The Knowledge Base can also be accessed at:

#### support.Tabs3.com

# Help

Help is installed with the software and is easily accessed by pressing F1, by clicking the **F** button, or by selecting the **Help | Help Topics** menu option. Help includes detailed information regarding

specific programs. Pressing F1 or clicking the *s* button opens Help for the window you are currently using. Many times, reading the appropriate Help topic may be the fastest way to find your answer.

# **Technical Support**

Tabs3 provides some of the best technical support in the industry. Service to our customers is extremely important to us—so much so that our motto is:

#### Reliable software. Trusted service.

Technical support is provided at no charge with a maintenance plan and is available from 8:00 a.m. to 5:00 p.m. Central Time, Monday through Friday. If you have any questions, please feel free to call our Technical Support staff at (402) 419-2210.

### Tabs3 Resellers & Consultants

Tabs3 software products are available through a national network of over 250 resellers and consultants. Resellers and consultants are small independent firms that specialize in the sales of licenses and the installation, training, and support of billing, financial, and practice management software for law firms. By having resellers and consultants service all 50 states, you can work directly with a local person familiar with Tabs3 software, who can provide personalized on-site installation, training, and support services. Visit our Web site for a reseller near you or contact our Sales staff at (402) 419-2200.

#### Tabs3.com/resellers/resellers.html

Thank you for choosing Tabs3 software. We look forward to serving your practice management and billing needs with reliable software and trusted service for many years to come. Let us know how we can help you get started with Tabs3 and PracticeMaster.
